TELBILLER

eZy TelBiller System for EPABX

eZyTelBiller software has powerful and robust features needed for today's communication system. A great tele- billing solution for small to medium size companies, which is geographically spread and uses many type of PABX systems for communication.

Easy to use navigations and interfaces are quite user friendly too. Informative dashboards and reports let you extract and analyze data in a variety of ways.

Benefits

- eZyTelBiller helps you manage the information related to communication in your office.
- It provides a centralized management control over EPABX installed in your offices, allowing you to implement billing plan which uniformly address PSTN billing schemes.
- It helps in monitoring and reporting telephone call activity in a single site to enterprise organizations that require tens of thousands of extensions at various sites.
- It helps streamlining and simplifying the communication system by identifying the billing irregularities, misuse, bottlenecks, inactivity and productivity loss.
- It collects necessary data, allocates the expenses, manages the accounting information which is quite time consuming normally, in a fast and reliable way.
